LinkedIn | GitHub | MY_PORTFOLIO
Tirupati, Andhra Pradesh – 524132, India

OBJECTIVE

Computer Science Engineering student with skills in Python, SQL, DBMS, HTML, CSS, JavaScript, and Django. Seeking an entry-level Software Developer role to apply programming, problem-solving, and web development skills.

EDUCATION

Sri Venkateswara College of Engineering *October 2022 - April 2026*

Bachelor of Technology (CSE) – CGPA: ***9.67/10*** *Tirupati*

SBN Junior College *November 2020 - March 2022*

Intermediate (MPC) – Percentage: ***77.5%*** *Venkatagiri (Tirupati)*

Z.P. High School - Manulalapeta *March 2020*

Secondary Education – GPA: ***9.3/10*** *Venkatagiri (Tirupati)*

SKILLS

- **Programming Languages:** Python, C
- **Web technologies:** HTML5, CSS3, JavaScript
- **Framework:** Django
- **Databases:** SQL(MySQL), DBMS
- **Tools & Platforms:** Git, GitHub, VS Code, Jupyter Notebook
- **Soft Skills:** Problem Solving, Adaptability, Time Management, Team Collaboration

PROJECTS

Air Pollution Forecasting – Academic Project / Front-End Developer Git Repo

Tech Stack: Python, Flask, HTML, CSS, Pandas, NumPy, Scikit-Learn, XG Boost, MySQL

Tools: VS Code, Jupyter Notebook, MySQL Workbench

- Developed an end-to-end air quality prediction system using Python, Flask, and MySQL to forecast AQI levels across Indian cities from the city_day.csv Kaggle dataset.
- Trained and evaluated six machine learning classification models, including XG Boost, which achieved 94.3% accuracy, outperforming other algorithms for pollutant level classification.
- Built a full-stack web app with user authentication, city-wise forms, and real-time result rendering using Flask, HTML/CSS, and MySQL.

Vegetable Inventory Management System Git Repo

Tech Stack: Python, File Handling | Tools: Git, GitHub, VS Code

Concepts: Dictionaries, Functions, Loops, Conditional Statements, Input Validation

- Developed a Python-based, menu-driven system to simplify the daily operations of a vegetable store.
- Implemented separate Owner and User modules enabling efficient inventory management, customer shopping, billing, and sales tracking.
- Built using Python Dictionaries, Functions, Loops, and file handling concepts.

Number Guessing Game Git Repo

Tech Stack: Python | Tools: Git, GitHub, Command Line Interface

Concepts: Control Flow, Loops, Conditionals, input Validation

- Developed a CLI number-guessing game using Python control flow, nested loops, and conditional branching.
- Implemented input validation, win streak tracking, and play-again loop to handle edge cases and improve user experience.

CERTIFICATES

Artificial Intelligence Fundamentals – IBM Skills Build February 2025

Python for Data Science – IBM July 2025

Programming Fundamentals using Python – Infosys Springboard July 2026
